

# WHEN YOUR MEDITECH SYSTEM IS DOWN TERAMACH'S PURE IPEOPLE SOLUTION HAS YOU COVERED!

Data continuity is a must even when systems are down. Without a well-planned strategy, patient care and the integrity of your hospital are both compromised. Scheduled updates, technical issues, environmental disasters, or unplanned network downtime - any of these events can prevent access to your MEDITECH system. When that happens, the offline process of maintaining quality patient care should not be inefficient, labor-intensive, or prone to human error.

## THE POWER OF THREE

Three leading technology companies joining forces to provide a single, unified Canadian-centric solution

### TeraMach

Government Procurement  
Vehicle Available

### IPeople

Ensuring Patient Data is Always  
Available regardless of downtime  
or outages

### Pure Storage

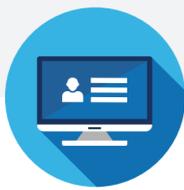

Risk Free Innovation  
Fast by Design

## WHERE DOWNTIME AND MIGRATION MERGE

TeraMach and Pure have teamed up to create a simple, scalable and reliable solution. With our Offline solution all of your patient's clinical history remains at your fingertips and available for patient care decisions, even when migrating to a new MEDITECH system or upgrading your current MEDITECH environment. By merging Data Migration and IPeople Offline views, a complete patient history is always accessible; thus offering your care providers a full view into the past care of your patients. With the power of Pure, you can achieve always on access to patient data.

### OFFLINE VIEWS

Offline Views is an intuitive and economic solution that provides quick and reliable access to your MEDITECH data during planned or unplanned downtimes.

### BATCH PRINT

The Batch Print add-on for Offline Views allows users to quickly generate patient's legal health records in report format. This information can be used to transfer patients from one hospital to another, satisfies Release of Information requests, and more.

## DOWNTIME REGISTRATION

Downtime Registration Solution allows your staff to maneuver patients through the registration process while maintaining a sense of integrity. Once your MEDITECH system is back online you will see that your recovery time is drastically reduced by eliminating the need to re-enter patient data. Downtime Registration will populate the data captured during downtime back into your system once it is back online.

### NETWORK DOWN

Network Down solution adds a layer of redundancy, so that downtime views are replicated to stand alone PC's giving staff access to critical patient information when your network is otherwise unattainable

### RANSOMWARE PROTECTION

Safemode Snapshots provides protection against Ransomware, ensuring that all critical data is protected

## WHAT OUR CUSTOMERS ARE SAYING...

"With IPeople Offline, we are not only better off but we are doubling down on our investment with IPeople. Previously, we could not offer the reassurance and support to our clinicians (or PFS) without IPeople Offline. The Offline solutions are essential to operational continuity so staff do not have to 'fly blind.' We have experienced more than great customer service with IPeople. It's a passionate commitment to service and excellence that really shines through because of the people. We have seen a tangible difference to how we are able to confidently deliver information services and solutions to our patients and staff which are near and dear to our hearts."

- Audrey Parks, Chief Information Officer, Salinas Valley Memorial Healthcare System
